

Guide to 4.2 Features

Version 4.2 (4.2.1)

Table of Contents

1. Java Version	2
2. New Features	3
2.1. Subqueries	3
2.2. New Property API	3
2.3. New types support	3
3. Deprecations and API incompatibilities	4
3.1. SelectQuery	4
3.2. Obsolete modules	4
3.3. ObjectId	4

This guide highlights the new features and changes introduced in Apache Cayenne 4.2. For a full list of changes consult RELEASE-NOTES.txt included in Cayenne download. For release-specific upgrade instructions check UPGRADE.txt.

Chapter 1. Java Version

Minimum required JDK version is 8 or newer. Cayenne 4.2 is fully tested with Java 8, 11 and 17.

Chapter 2. New Features

2.1. Subqueries

Expressions now support subqueries.

```
ColumnSelect<Long> subQuery = ObjectSelect
    .columnQuery(Artist.class, Artist.ARTIST_ID_PK_PROPERTY)
    .where(...);
List<Artist> artists = ObjectSelect.query(Artist.class)
    .where(Artist.ARTIST_ID_PK_PROPERTY.in(subQuery))
    .select(context);
```

2.2. New Property API

Property API are greatly revised. This API allows to use type aware expression factories aka Properties. These properties are normally generated as static constants in model classes, but they can also be created manually by `PropertyFactory` if needed. New API provides designated properties for different datatypes and relationships, including special variant that represents primary keys.

Usage example in `ObjectSelect` query:

```
Painting painting = //...
Artist artist = ObjectSelect.query(Artist.class)
    .where(Artist.PAINTING_ARRAY.contains(painting))
    .and(Artist.DATE_OF_BIRTH.year().gt(1950))
    .and(Artist.ARTIST_NAME.lower().like("pablo%"))
    .selectOne(context);
```

See [JavaDoc](#) for details.

2.3. New types support

Cayenne 4.2 brings support for the Json and Geo types that are common now in RDBMS, see [this demo](#) for the usage example. Additionally, Cayenne now supports `java.time.Duration` and `java.time.Period` out of the box.

Chapter 3. Deprecations and API incompatibilities

For the full list of deprecations refer to [UPGRADE.txt](#). Here's the most important changes.

3.1. SelectQuery

`SelectQuery` is deprecated in favour of `ObjectSelect`. It's still fully functional and could be used, but it will be removed in a future.

3.2. Obsolete modules

There are several modules that are deprecated in Cayenne 4.2 and will be removed in a later version:

- Cayenne ROP
- Cayenne Web
- Event bridges: XMPP, JMS and JGroups

These modules could be still safely used in 4.2.

3.3. ObjectId

`ObjectId` can't be instantiated directly, `ObjectId.of(..)` factory methods should be used. E.g. `ObjectId.of("Artist", 1)` instead of `new ObjectId("Artist", 1)`.
